DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/1/03 has been entered.

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Application/Control Number: 10/015,985

Art Unit: 2817

Claims 11-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over 3. Devaux et al. (of record).

Devaux et al. teaches a transmission line strip which is surrounded by air. The line (i.e. a high speed interconnection system) is supported by dielectric support sections (2). A ground plate/backplane (3) is provided at the bottom and a ground plane (4) is provided at the top. The line has minimized disturbance of propagation (i.e. it is impedance matched since reflections, which are a result of impedance mismatch, are a type of disturbance which is associated with transmission lines, and Devaux is teaching minimizing disturbance which inherently would include the ground plate being a predetermined distance from the line to provide the desired impedance to thus provide for the impedance match since the distance to ground is a variable in the impedance of a transmission line) (see Col. 1, lines 32-37).

However, Devaux does not explicitly teach that the structure includes a plurality of transmission lines (Claims 11 and 12).

It would have been considered obvious to one of ordinary skill in the art to have provided a plurality of the transmission lines in the Devaux structure, because it would have provided the advantageous benefit of interconnections for a pre-selected quantity of devices or additional devices.

Response to Arguments

Applicant's arguments filed 10/1/03 have been fully considered but they are not 4. persuasive.

Application/Control Number: 10/015,985

Art Unit: 2817

Applicant argues that Devaux does not teach a ground plate a pre-determined distance from the transmission line in which the distance from the line is reflective of a predetermined impedance of the system.

Applicant's argument is not convincing. Devaux teaches two ground planes which are spaced from the transmission line. Also Devaux clearly refers to the impedance of the line in relation to minimizing disturbance of propagation in the transmission line. If reflections (a form of disturbance in transmission lines) caused by impedance mismatch were present in the Devaux device, the Devaux device then would not meet the criteria of minimizing disturbance of propagation as taught by Devaux (e.g. see Col. 1, lines 33-37). As is conventional when referring to transmission lines, the characteristic impedance is directly related to the conductive transmission line and its distance from its ground planes. Since Devaux teaches impedance matching as discussed above, clearly it is implied that the distance to the ground planes is a predetermined distance to provide the impedance match.

Allowable Subject Matter

5. Claims 1-4 and 8-10 are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen E. Jones whose telephone number is 571-272-1762. The examiner can normally be reached on Monday through Friday from 8 AM to 4 PM.

Art Unit: 2817

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert J. Pascal can be reached on 571-272-1769. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956. \mathcal{L}
